## Waterfall launches solution for IP video surveillance

### New technology to eliminate risk inherent in surveillance network connectivity

Ynetnews

Waterfall Solutions Ltd., provider of secure unidirectional connectivity for Segregated Networks, IP based Surveillance Infrastructure and SCADA systems launched Sunday the first IP-based solution for video surveillance physical layer security.

WF-ISE (Waterfall IP Surveillance Enabler) helps eliminate outside threats, thereby enabling companies and organizations to enjoy the advantages of IP-based surveillance without suffering from the dangers inherent in network connectivity.

"Every time you plug in an IP-based camera you open yourself to a potential attack from a new network point. With WF-ISE that threat is eliminated. WF-ISE secures all network points of IP surveillance connectivity," said Lior Frenkel, Co-Founder and CTO of Waterfall Solutions.

WF-ISE can adapt to all forms of surveillance equipment, including motion detectors and sound activated alarms. Waterfall Solutions has several patents pending for unidirectional protection and usage, including for IP surveillance systems.

Waterfall Solutions Ltd. is a provider of secure unidirectional connectivity for Segregated Networks, IP Surveillance Infrastructure and SCADA Systems.

Developed in 2004 to meet the needs of the Israeli Ministry of Defense, Waterfall has been deployed in many homeland security and critical national infrastructure organizations, as well as a large variety of financial and enterprise customers.
